

# Versa Jet™ Burner

## It's Time for an Upgrade

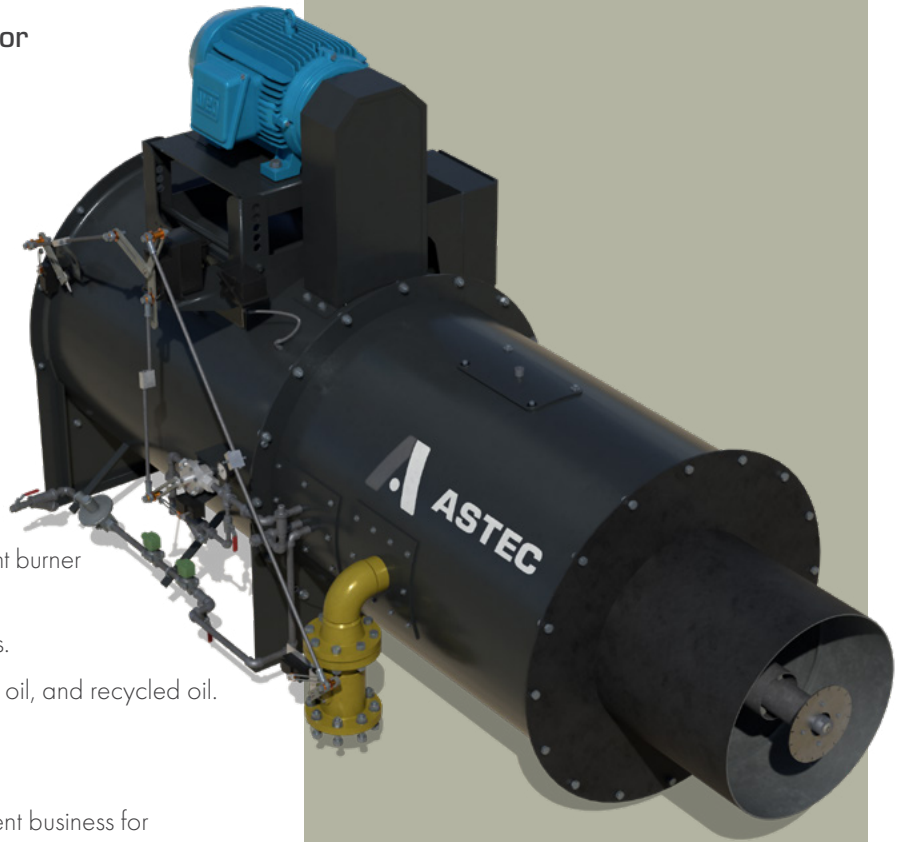

Poor reliability, high maintenance costs or rising fuel costs can justify retrofitting your plant with a new Astec burner.

### Introducing the Versa Jet Burner: Ideal for Retrofits

- The Astec Versa Jet burner is an evolutionary leap forward. The versatile platform has the capacity to fire at a range of rates and can be easily configured to meet production needs.
- Compatible with virtually all drum designs without complicated drum modifications.
- Designed to consume less electricity than the current burner in most cases.
- Ability to work with existing controls and fuel trains.
- Performs well at all ranges on LP, natural gas, fuel oil, and recycled oil.

### Why Choose Astec?

- Astec has been in the asphalt production equipment business for 50 years and has been building reliable and efficient burners for the asphalt industry for over 20 years.
- The Astec in-house environmental compliance director and team of experienced burner engineers have the knowledge and the expertise to help you replace a less efficient or obsolete burner with a new Astec burner.
- As a premier manufacturer providing a full range of solutions for the asphalt mixing industry, Astec is well positioned to provide complete burner solutions.
- Astec's experienced team of dedicated combustion technicians deliver best in class service response.
- The Astec in-house construction team is available to correctly install your new burner at your site.
- Astec maintains a large inventory of parts – including parts for burners. Most ship within 48 hours of an order. Same day shipment available.
- Astec continually strives to provide the most reliable and sophisticated solutions to operators of asphalt mixing plants.
- We take care of our customers better than anyone else.
