(Zip Code)

David C. Silvious (423) 899-5898
(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

Company Profile:

Astec Industries, Inc. ("we," "our," "us," "Astec," or the "Company") designs, engineers, manufactures and markets equipment and components used primarily in road building and related construction activities. The Company's products are used in each phase of road building, from quarrying and crushing the aggregate to application of the road surface. The Company also manufactures certain equipment and components unrelated to road construction, including equipment for the mining, quarrying, construction and demolition industries and port and rail yard operators; gas and oil drilling rigs; water well and geothermal drilling rigs; industrial heat transfer equipment; whole-tree pulpwood chippers; horizontal grinders; and blower trucks. The Company's products are marketed both domestically and internationally. In addition to equipment sales, the Company manufactures and sells replacement parts for equipment in each of its product lines and replacement parts for some competitors' equipment. The distribution and sale of replacement parts is an integral part of the Company's business.

Section 1 – Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

In accordance with the disclosure requirements promulgated by the U.S. Securities and Exchange Commission, we have undertaken efforts to determine our conflict minerals¹ reporting requirements for the period from January 1 to December 31, 2014.

We have determined that during 2014 our company manufactured (or contracted to manufacture) products as to which conflict minerals are necessary to the functionality or production of such products. As is required, we have conducted a good faith reasonable country of origin inquiry ("RCOI") reasonably designed to determine whether the necessary conflict minerals originated in the DRC or an adjoining country or came from recycled or scrap sources.

Astec's RCOI process included conducting an inquiry of our direct suppliers using the Conflict-Free Sourcing Initiative's Conflict Minerals Reporting Template. We relied upon our suppliers' representations regarding the origin of their minerals and their smelter data to determine the source of the conflict minerals within our supply chain. Based on the results of our RCOI, we exercised due diligence on the source and chain of custody of the conflict minerals.

The Company has filed this Specialized Disclosure Form and the associated Conflict Minerals Report, which appears as Exhibit 1.01 hereto and is publicly available on the Company's website at <http://www.astecindustries.com/>.

Item 1.02 Exhibit

The Company's Conflict Minerals Report is provided as Exhibit 1.01 hereto.

Section 2 – Exhibits

Item 2.01 Exhibits

The following exhibit is filed as part of this report.

Exhibit 1.01 – Astec Industries, Inc.'s Conflict Minerals Report for the period January 1 to December 31, 2014.

=====
¹ The term "conflict mineral" is defined in Section 1502(e)(4) of the Dodd-Frank Wall Street Reform and Consumer Protection Act as (A) columbite-tantalite, also known as coltan (the metal ore from which tantalum is extracted); cassiterite (the metal ore from which tin is extracted); gold; wolframite (the metal ore from which tungsten is extracted); or their derivatives; or (B) any other mineral or its derivatives determined by the Secretary of State to be financing conflict in the Democratic Republic of the Congo ("DRC") or an adjoining country.

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Date: May 26, 2015

CONFLICT MINERALS REPORT OF
ASTEC INDUSTRIES, INC.
FOR THE REPORTING PERIOD FROM
JANUARY 1 TO DECEMBER 31, 2014

I. Introduction

This is the Conflict Minerals¹ Report of Astec Industries, Inc. ("we," "our," "us," "Astec," or the "Company") prepared for calendar year 2014 (except for conflict minerals that, prior to January 31, 2013, were located outside of the supply chain) in accordance with Rule 13p-1 ("Rule 13p-1") under the Securities Exchange Act of 1934 (the "Act"). Numerous terms in this Report are defined in Rule 13p-1 of the Act and Form SD and the reader is referred to those sources, and also to Release No. 34-67716 (August 22, 2012) of the Act (the "Adopting Release") for such definitions.

In accordance with Rule 13p-1, we undertook efforts to determine whether the necessary conflict minerals in our products were or were not "DRC conflict-free." The Company designed its efforts in conformity with the internationally recognized due diligence framework put forth in the *OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas*² ("OECD Due Diligence Guidance") and related Supplements.

The statements below are based on the activities performed to date and in good faith by Astec and are based on the infrastructure and information available at the time of this filing. Factors that could affect the accuracy of these statements include, but are not limited to, incomplete supplier data or available smelter data, errors or omissions by suppliers or smelters, evolving definition and confirmation of smelters, incomplete information from industry or other third-party sources, continuing guidance regarding the SEC final rules, and other issues.

II. Design of Conflict Minerals Program

The Company designed its conflict minerals program to conform, in all material respects, with the five-step framework of the OECD Due Diligence Guidance, the Supplement on Tin, Tantalum, and Tungsten, and the Supplement on Gold, specifically as they relate to our position in the minerals supply chain as a "downstream" company:

- Step 1: Establish strong company management systems
- Step 2: Identify and assess risks in the supply chain
- Step 3: Design and implement a strategy to respond to identified risks
- Step 4: Carry out independent third-party audit of smelter/refiner's due diligence practices
- Step 5: Report annually on supply chain due diligence.

We relied upon multi-stakeholder initiatives that provide verification processes for conflict-free minerals from smelters or refiners who may provide those minerals to companies in our supply chain. The Company, as a purchaser of component parts, is many steps removed from the mining of conflict minerals. The Company does not purchase raw ore or unrefined conflict minerals and conducts no purchasing activities directly in the Covered Countries.

Astec also engaged Crowe Horwath, an international accounting and consulting firm, to assist in the design and implementation of our program. We utilized Crowe Horwath's technology platform to communicate with our supply chain, collect Conflict Minerals Reporting Templates, and validate key information from our suppliers.

III. Due Diligence Measures Performed by Astec

The following describes the measures taken to reasonably determine the country of origin and to exercise due diligence in the mineral supply chain in conformance with the OECD Due Diligence Guidance.

Step 1: Establish strong company management systems

- a. Conflict minerals team – Astec established a conflict minerals team that includes individuals from the appropriate business units and departments. The team was structured to ensure critical information, including the Company's conflict minerals policy, reached relevant employees and suppliers.
- b. Conflict minerals policy – Astec adopted and published a policy establishing the expectations of our suppliers. The policy resides on our corporate website. It is periodically reviewed and will be updated, if necessary.
- c. Internal engagement – We developed a training program for internal use to educate relevant employees on our conflict minerals program and reporting obligations.
- d. Supplier engagement – Astec provided educational materials to our queried suppliers. Suppliers were provided information on the conflict minerals disclosure requirements as well as recommendations for developing, implementing, and documenting a conflict minerals compliance program.
- e. Company level grievance mechanism – As recommended by the OECD Due Diligence Guidance, Astec has established a grievance mechanism as a risk-awareness system for conflict minerals issues. Stakeholders can communicate directly and confidentially with our compliance officer.
- f. Records management – Astec will maintain records relating to our conflict minerals program in accordance with the recommended record retention guidelines.

Step 2: Identify and assess risks in the supply chain

We performed the following steps as part of our risk assessment process:

- a. Identify products in scope – Our conflict minerals team conducted a detailed review of the products manufactured or contracted to be manufactured during the Reporting Period to identify products that should be deemed in-scope as described by the Adopting Release.

- b. Conduct Reasonable Country of Origin Inquiry ("RCOI") – Astec utilized the industry-developed Conflict Minerals Reporting Template ("CMRT") to query our suppliers for conflict minerals information. We requested this information from the Tier 1 suppliers who provide material and components for the products deemed in-scope by our conflict minerals team. We evaluated the responses from the templates submitted by our suppliers to determine our reporting obligation based on this RCOI.
- c. Completed additional follow-up – Astec contacted direct suppliers that did not respond to our request for conflict minerals information by the requested date. We also worked to clarify and validate the information provided by our suppliers.
- d. Identify smelters/processors – Astec compiled a list of smelters/processors in our supply chain using our supplier's responses in their CMRTs. The Company reconciled this list to the list of smelter facilities designated by the Conflict-Free Sourcing Initiative's ("CFSI") Conflict-Free Smelter Program. We have provided that list in this report.

Step 3: Design and implement a strategy to respond to identified risks

We performed the following steps as part of our risk management plan:

- a. Designed and implemented a plan – Astec used established risk rating criteria to evaluate suppliers based on the responses provided within their CMRT as well as any additional documentation furnished to support those responses. The resulting risk ratings will be used to develop specific supplier outreach and education to address the identified risks.
- b. Verify smelters – As part of the risk mitigation process, the Company reconciled the list of smelters collected from suppliers to the list of smelter facilities designated as "conflict-free" by the CFSI's Conflict-Free Smelter Program.

Step 4: Carry out independent third-party audit of smelter/refiner's due diligence practices

Astec is relying on the CFSI's published lists to verify the conflict-free status of smelters/processors that source from Covered Countries.

Step 5: Report annually on supply chain due diligence

Astec has determined that a portion of the conflict minerals used to manufacture our products originated from the Covered Countries. Accordingly, this Conflict Minerals Report has been filed with the SEC and is available on our website at <http://www.astecindustries.com/>.

IV. Product Determination

On the basis of the measures described above, the Company has determined that all of our products manufactured as of December 31, 2014 are considered to be DRC conflict undeterminable.

V. Product Description; Processing Facilities

Products – The Company designs, engineers, manufactures, and markets equipment and components used primarily in road building and related construction activities. The Company's products are used in each phase of road building, from quarrying and crushing the aggregate to application of the road surface. The Company also manufactures certain equipment and components unrelated to road construction, including equipment for the mining, quarrying, construction and demolition industries, and port and rail yard operators; gas and oil drilling rigs; water well and geothermal drilling rigs; industrial heat transfer equipment; whole-tree pulpwood chippers; horizontal grinders; and blower trucks. The Company's products are marketed both domestically and internationally. In addition to equipment sales, the Company manufactures and sells replacement parts for equipment in each of its product lines and replacement parts for some competitors' equipment. The distribution and sale of replacement parts is an integral part of the Company's business.

Processing Facilities – Based on our due diligence process and the information received from our suppliers, the following facilities may have been used to process conflict minerals used in our products.

VI. Future Due Diligence

We will continue to communicate our expectations and information requirements to our direct suppliers. Over time, we anticipate that the amount of information globally on the traceability and sourcing of these ores will increase and improve our knowledge. We will continue to make inquiries to our direct suppliers and undertake additional risk assessments when potentially relevant changes in facts or circumstances are identified. If we become aware of a supplier whose due diligence needs improvement, we may continue the trade relationship while that supplier improves its compliance program. We expect our suppliers to take similar measures with their suppliers to ensure alignment throughout the supply chain.

In addition to those above, the Company will undertake the following steps during the next compliance period:

- Continue to collect responses from suppliers using the CMRT.
- Monitor and track performance of risk mitigation efforts.
- Compare and validate RCOI results to information collected via independent conflict-free smelter validation programs such as the CFSI.
- Continue to allow verified conflict-free material from the region to enter our supply chain.

VII. Independent Private Sector Audit

Not required for calendar year 2014.
